

Metallic Foil Guide

Prepare 3 separate files.

One file will include your final design.

For the Foil elements, this will be a separate file with the elements changed to 100% black (CMYK 0/0/0/100). Include a file for the non-Foil elements.

A few things to note about Foil:

- Foil is only available on **Soft Touch**.
- Foil elements should be at least .5pt in thickness. Negative spaces should be also be .5pt. This will prevent spaces from filling in and for the foil to adhere.
- We cannot align Foil elements perfectly to non-Foil elements.
- Our foil is flat, not raised.
- * - Files Should include .125" bleed.
- Important elements should be kept at least 1/8" away from the edges of the card.
